EVENTFORCE MANAGEMENT SYSTEM-SALESFORCE IMPLEMENTATION

User Story:

The EventForce Management System is developed as a unified solution on the Salesforce platform to streamline and manage all event-related activities. It supports key operations such as client reservations, event scheduling, venue allocation, vendor management, cancellation handling, automated notifications, and feedback tracking.

The application allows event management teams to efficiently organize and maintain information related to Events, Clients, Vendors, Venues, and Feedback through a well-defined Salesforce data model with suitable object relationships. Automated Salesforce Flows are implemented to send event reminders and update process statuses, while an Approval Process is used to review and authorize event cancellation requests.

Custom Apex Classes and Triggers are incorporated to enforce business rules, including venue availability management and the prevention of duplicate venue bookings. The system also includes a Lightning App along with Reports and Dashboards that offer real-time insights into event schedules, vendor performance, and overall operational activities.

By centralizing event management functions, the solution enhances operational efficiency, improves booking and vendor coordination, ensures data consistency, strengthens communication, increases visibility into event operations, and delivers a better experience for customers.

1. Introduction

1.1 Project Overview

The EventForce Management System is a customer relationship management solution built on the Salesforce platform to simplify and optimize event planning and administration activities. It provides a centralized environment for managing event-related information, including clients, events, venues, vendors, customer feedback, and cancellation requests.

The system leverages Salesforce features such as custom objects, object relationships, validation rules, Flows, Approval Processes, Apex Classes, Apex Triggers, Reports, and Dashboards to automate and control essential business operations. These capabilities help manage venue availability, avoid scheduling conflicts, generate event notifications, process cancellation requests through approvals, maintain feedback records, and monitor operational performance.

The primary objective of the solution is to minimize manual processes, strengthen coordination among event stakeholders, improve the reliability and consistency of data, enhance communication between clients and event teams, and provide comprehensive visibility into event operations through a unified Salesforce-based platform.

1.2 Purpose

The EventForce Management System is developed to establish a unified Salesforce-based platform that simplifies, automates, and enhances event management activities. The system is intended to support efficient planning, coordination, and monitoring of events while ensuring accurate and organized data management.

The key purposes of the system are:

● Maintain a centralized repository for client, event, venue, vendor, and feedback records.

● Simplify event scheduling, booking management, and venue allocation activities.

● Eliminate venue scheduling conflicts by enforcing automated business rules through Apex-based validation and booking controls.

● Automate important operational processes such as event notifications, reminders, and event cancellation approvals.

● Strengthen collaboration and communication among clients, event coordinators, vendors, and venue management teams.

● Deliver meaningful insights through reports and dashboards that support monitoring, analysis, and informed decision-making.

● Minimize manual administrative tasks, improve data consistency and accuracy, and enhance the quality of service provided to clients.

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Event Operations Manager	oversee and organize event management activities effectively	client records, event schedules, venue details, and vendor information are scattered across different sources	successful event execution requires coordination among several departments and stakeholders	frustrated and worried
PS-2	Event Coordinator	schedule and administer event bookings smoothly	managing event information, customer details, and venue reservations involves significant manual effort	there is no integrated system to handle the entire event management process	overwhelmed and dissatisfied
PS-3	Venue Manager	monitor venue availability and allocations accurately	a venue can accidentally be reserved for more than one event at the same time	effective booking management requires real-time availability checks and conflict prevention	concerned and uncertain
PS-4	Vendor Manager	organize and track vendor participation for various events	vendor records and event assignments are maintained separately	multiple vendors and services may be involved in a single event, making coordination difficult	overwhelmed and concerned
PS-5	Event Coordinator	share event updates and reminders with clients promptly	notifications and reminders need to be sent manually	clients must be informed in advance about upcoming events and schedule changes	stressed and concerned

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-6	Event Administrator	handle event cancellation requests in a structured and efficient manner	cancellation requests require approval and continuous status tracking	cancellation decisions must follow a defined approval workflow to ensure proper control and accountability	frustrated and uncertain
PS-7	Event Coordinator	gather, maintain, and review client feedback effectively	feedback records must be stored and linked with relevant event and client information	customer feedback is associated with both events and clients and needs proper management	concerned about customer satisfaction
PS-8	Event Operations Manager	track event activities and evaluate operational performance	important operational data is not readily available in a single location	event-related information must be consolidated into reports and dashboards for analysis and monitoring	concerned and less confident in decision-making

2.2 Empathy Map Canvas

User Persona: Event Coordinator

Role: Event Coordinator

Primary Responsibility:
Manage event bookings, client requirements, venue reservations, vendor coordination, and event updates.

Think & Feel

- Wants events to run smoothly without conflicts.
- Focuses on client satisfaction and timely execution.

Hear

- Receives updates from clients, vendors, and venue managers.
- Gets instructions from event administrators.

See

- Event details, client information, and venue availability.
- Vendor assignments, cancellations, and feedback records.

Say & Do

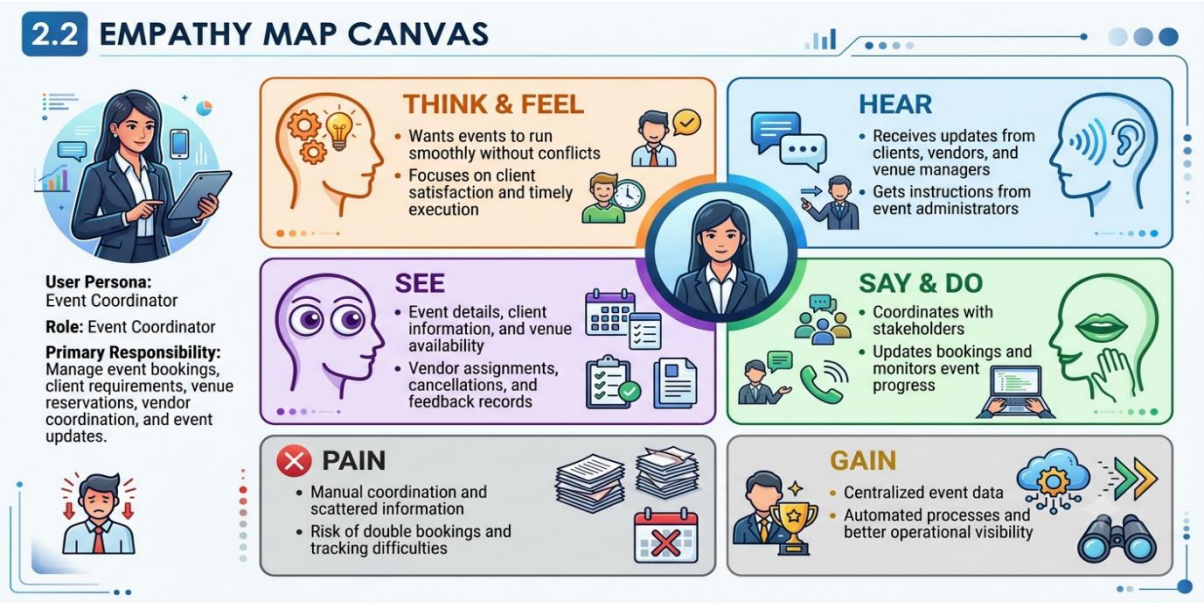

- Coordinates with stakeholders.
- Updates bookings and monitors event progress.

Pain

- Manual coordination and scattered information.
- Risk of double bookings and tracking difficulties.

Gain

- Centralized event data.
- Automated processes and better operational visibility.

2.3 Brainstorming & Idea Prioritization

- **Ideas Considered**

Manual Record Management
Maintain event, client, venue, and vendor information manually using registers and physical records. Although this method is simple, it is time-consuming, difficult to maintain, and more prone to errors.

Spreadsheet-Based Tracking
Track event bookings, schedules, client details, and vendor information using spreadsheets. This approach provides digital record management but offers limited automation and lacks real-time coordination.

Standalone Event Management Portal
Develop a dedicated portal for managing event planning, bookings, venue reservations, and vendor activities. While it provides customization, it requires higher development effort, technical expertise, and continuous maintenance.

Salesforce CRM
Use the Salesforce platform to centralize event management operations, automate workflows, and manage all event-related information within a single system. This approach requires proper configuration and implementation but offers advanced business capabilities.

- **Final Selection**

After evaluating the available alternatives, **Salesforce CRM** was selected as the most suitable solution for the EventForce Management System due to the following advantages:

Automation:
Automates reminders, approval workflows, status updates, notifications, and other business processes, reducing manual effort and improving efficiency.

Scalability:
Supports the growth of event operations, users, records, and future business requirements without major system modifications.

Real-Time Visibility:
Provides centralized access to event information through reports and dashboards, enabling effective monitoring and decision-making.

- **Decision**

Salesforce CRM provides the best fit for developing the EventForce Management System because it delivers a centralized, automated, and scalable platform for efficiently managing end-to-end event operations.

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Stage	Customer Journey Stage	Description
1	**Event Enquiry & Client Registration**	Client information, event requirements, and contact details are collected and stored within Salesforce.

Stage	Customer Journey Stage	Description
2	**Event Planning & Booking**	Event-related information such as event category, scheduled date, budget, and current status is recorded and maintained.
3	**Venue Selection & Reservation**	Appropriate venues are shortlisted, availability is verified, and reservations are handled while avoiding scheduling conflicts and duplicate bookings.
4	**Vendor Coordination**	Vendors and necessary services are allocated to events, and their availability and assignment status are monitored.
5	**Event Confirmation & Communication**	Once events are confirmed, automated communications are initiated, including reminder notifications sent to clients before the event date.
6	**Event Execution & Monitoring**	Event activities and operational updates are tracked using Salesforce records, reports, and dashboards for effective monitoring.
7	**Cancellation & Approval**	Event cancellation requests are processed through an approval workflow, ensuring proper status changes and notification updates.
8	**Feedback & Closure**	Feedback from clients is gathered after event completion, and event records are finalized for performance tracking and future reference.

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1	Event Management
FR-2	Client Management
FR-3	Venue Management
FR-4	Vendor Management
FR-5	Event–Vendor Assignment
FR-6	Venue Availability and Double-Booking Prevention
FR-7	Automated Event Reminder Notifications
FR-8	Event Cancellation Approval Process
FR-9	Feedback Management
FR-10	Reports and Dashboards
FR-11	Automatic Event Status Updates
FR-12	Data Import Using Salesforce Data Import Wizard

Non-Functional Requirements

NFR	Description
Usability	Provides a user-friendly Lightning Application that simplifies event management activities and system navigation.
Security	Ensures data protection through profiles, roles, and permission-based access mechanisms.
Reliability	Delivers dependable automation, approval workflows, and venue booking validation processes.
Performance	Supports quick and efficient handling of event-related and operational information.
Availability	Enables authorized users to access the system anytime through Salesforce cloud services.
Scalability	Accommodates increasing numbers of events, clients, vendors, venues, and users without affecting performance.
Maintainability	Allows easy monitoring and enhancement of Flows, Apex classes, validation rules, and security configurations.
Data Integrity	Maintains accurate and consistent records through validation mechanisms and controlled data migration procedures.

3.4 Technology Stack

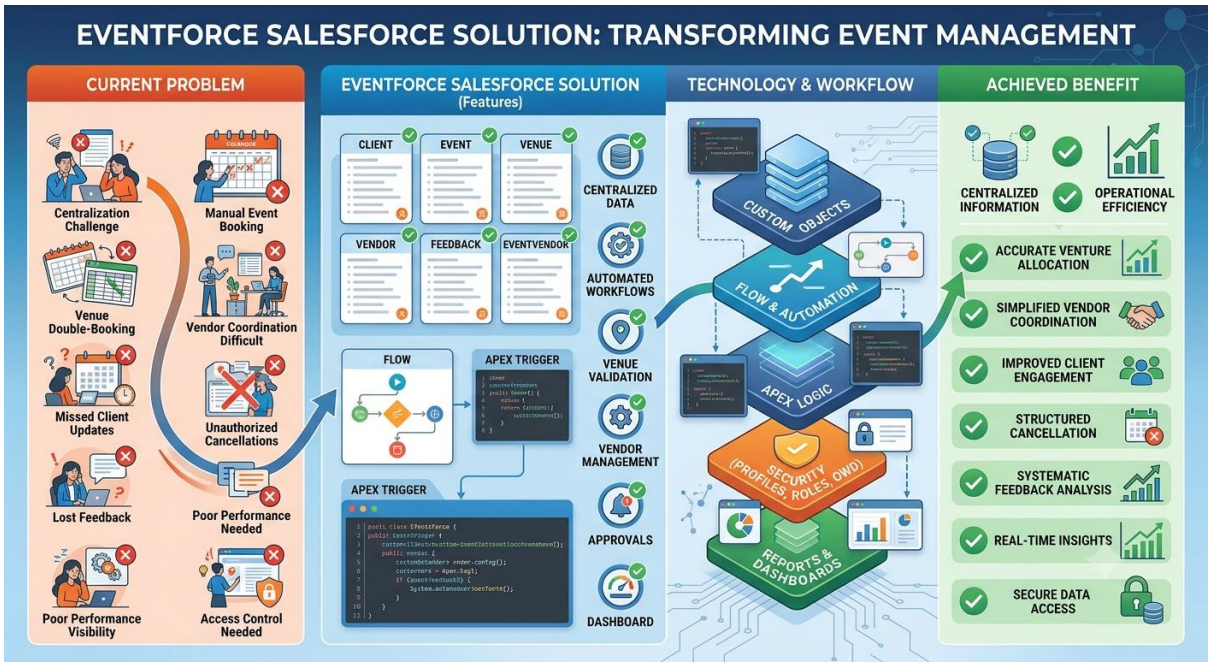

Layer	Technology
CRM Platform	Salesforce Lightning Platform
Development Language	Apex
User Interface	Lightning App Builder
Automation	Salesforce Flow
Database	Salesforce Custom Objects
Security	Profiles, Roles, Permission Sets
Reporting	Salesforce Reports & Dashboards
Data Migration	Data Import Wizard
Approval Management	Salesforce Approval Process
Scheduling	Scheduled Apex
Batch Processing	Apex Batch Classes
Notifications	Email Alerts & Flow Automation

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The EventForce Management System effectively aligns business requirements with the capabilities offered by the Salesforce platform. By leveraging custom objects, automation tools, Apex programming, approval workflows, security mechanisms, and analytical dashboards, the system addresses key challenges encountered during event planning, coordination, and execution.

Problem	EventForce Salesforce Solution	Benefit Achieved
Managing client, event, venue, and vendor information in a single location is challenging.	Custom Salesforce objects such as Event, Client, Venue, Vendor, Feedback, and EventVendor are implemented.	Ensures centralized, organized, and easily accessible event-related information.
Event booking involves several repetitive manual tasks.	Salesforce Flows and workflow automation are utilized.	Minimizes manual intervention and increases operational efficiency.
There is a possibility of reserving the same venue for multiple events.	Apex Trigger and VenueStatusHelper logic validate venue availability.	Prevents duplicate bookings and ensures accurate venue allocation.
Monitoring vendor assignments and services is difficult.	EventVendor junction object and Vendor records manage vendor associations.	Simplifies vendor tracking and event–vendor coordination.
Clients may miss important event updates and reminders.	Automated 3-Day Reminder Flow sends notifications before scheduled events.	Improves communication and client engagement.
Cancellation requests require proper authorization and tracking.	Event Cancellation Approval Process manages approval workflows.	Provides a structured approach for processing cancellations and updating event status.
Feedback collected after events needs to be linked with relevant records.	Feedback object is connected to both Event and Client records.	Enables systematic feedback storage and analysis.
Monitoring event operations and performance is difficult.	Reports and EventForce Operations Dashboard provide real-time insights.	Enhances visibility for tracking activities and decision-making.
Different users require varying levels of system access.	Profiles, Roles, Permission Sets, Organization-Wide Defaults (OWD), and Sharing Rules are configured.	Ensures secure and controlled access to data and system functionality.

4.2 Proposed Solution

The EventForce Management System is designed to streamline and automate event management activities by utilizing Salesforce CRM capabilities. The solution integrates data management, workflow automation, business logic, and security features to improve overall event planning and coordination.

Functional Requirements

Parameter	Description
Problem	Traditional event management processes are often manual, decentralized, and difficult to monitor effectively.
Solution	A Salesforce-based EventForce Management System that centralizes event-related activities and information.
Innovation	Automated event reminders, venue availability validation, double-booking prevention, and approval-based cancellation management.
Impact	Enhances event coordination, reduces administrative effort, and provides greater operational transparency.
Business Model	Centralized platform for managing events, clients, venues, vendors, and feedback within a single system.
Scalability	Designed to support increasing numbers of events, clients, vendors, venues, and system users without affecting performance.

4.3 Solution Architecture

Major Components of the EventForce Management System

Data Management Layer

- Event Object
- Client Object
- Vendor Object
- Venue Object
- EventVendor Junction Object
- Feedback Object

Validation & Business Rules Layer

- Validation Rules
- Formula Fields

Automation Layer

- Salesforce Flows
- Approval Process

Custom Logic Layer

- Apex Triggers
- Apex Classes
- Batch Apex
- Scheduled Apex

Security & Access Control Layer

- Profiles
- Roles
- Permission Sets
- Sharing Rules

Data Migration Layer

- Data Import Wizard

User Interface Layer

- Lightning Application

Analytics & Reporting Layer

- Reports
- Dashboards

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The EventForce Management System was developed using the Agile Software Development Methodology. The project was divided into Epics, User Stories, and Story Points to ensure effective planning and execution. Development activities were organized into multiple sprints, and velocity estimation was used to monitor team productivity and project progress.

Key Planning Activities

- Agile development methodology was adopted.
- Requirements were categorized into Epics and User Stories.
- Story Points were assigned based on complexity and effort.
- Development was carried out through sprint-based iterations.
- Velocity calculations were used for sprint estimation and tracking.

Product Backlog, Sprint Schedule and Estimation

Sprint	Functional Requirement (Epic)	User Story No	User Story / Task	Story Points	Priority	Team Member
Sprint-1	Event Management	US-01	As an Event Coordinator, I need to create and manage event records with details such as event type, date, and status to maintain standardized event information.	**8**	High	**Abarna**
Sprint-1	Client & Venue Management	US-02	As an Event Coordinator, I need to link clients and venues to events so that event planning and coordination can be managed efficiently.	**3**	High	**Kiruthika**

Sprint	Functional Requirement (Epic)	User Story No	User Story / Task	Story Points	Priority	Team Member
Sprint-2	Vendor Management	US-03	As a Vendor Manager, I need to assign vendors to specific events to ensure proper coordination of required services.	**5**	High	**Indhudharshini**
Sprint-2	Notifications & Automation	US-04	As a Client, I need to receive event reminder notifications so that I am informed about upcoming events.	**5**	High	**Harinishakthu**
Sprint-3	Approval Management	US-05	As an Event Coordinator, I need event cancellation requests to pass through an approval workflow to maintain control over cancellations.	**8**	High	**Abarna**
Sprint-3	Venue Management & Apex Logic	US-06	As a Venue Manager, I need the system to prevent duplicate venue reservations so that scheduling conflicts are avoided.	**5**	High	**Gnanasundari**
Sprint-4	Security & Access Management	US-07	As an Event Administrator, I need role-based access controls so that users can access only authorized information.	**3**	High	**Kiruthika**
Sprint-4	Reporting & Analytics	US-08	As Management, I need reports and dashboards to monitor event operations and support decision-making.	**5**	Medium	**Indhudharshini**

Project Tracker, Velocity and Burndown Chart

Sprint	Total Story Points	Duration	Sprint Start Date	Planned Sprint End Date	Story Points Completed	Actual Release Date
Sprint-1	20	6 Days	06 Jul 2026	11 Jul 2026	20	11 Jul 2026
Sprint-2	20	6 Days	13 Jul 2026	18 Jul 2026	20	18 Jul 2026
Sprint-3	20	6 Days	20 Jul 2026	25 Jul 2026	20	25 Jul 2026
Sprint-4	20	6 Days	27 Jul 2026	01 Aug 2026	20	01 Aug 2026

Team contribution

Team Member	Story Points
Abarna	16
Gnanasundari	10
Harinishakthi	9
Indhudharshini	9
Kiruthika	6

6. PROJECT DEVELOPMENT PHASE

Phase 1: Requirement Analysis & Planning

The **EventForce Management System** was developed on Salesforce to simplify event management activities such as client handling, venue booking, vendor coordination, and feedback management. The system also automates reminders, approvals, and event tracking through Salesforce automation tools.

Functional Scope

- Custom Objects: Event, Client, Vendor, Venue, Feedback, and EventVendor.
- Object Relationships using Lookup and Master-Detail.
- Flow Automation for reminders and notifications.
- Validation Rules and Formula Fields.

- Approval Process for event cancellations.
- Profiles, Roles, and Permission Sets.
- Reports and Dashboards.

Stakeholders

- Clients
- Event Coordinators
- Vendors
- Venue Managers
- System Administrators

Development Roadmap

1. Create Objects and Fields.
2. Configure Relationships.
3. Develop Flows and Automation.
4. Configure Security Settings.
5. Implement Approval Process.
6. Develop Apex Classes and Triggers.
7. Create Reports and Dashboards.

Phase 2: Backend Development & Configuration

This phase focused on building the core functionality of the EventForce system using Salesforce configuration and Apex development. Automation was implemented using Flows, Validation Rules, Formula Fields, and Approval Processes. Apex Classes and Triggers were used for venue validation and booking management, while security was enforced through Roles, Profiles, Permission Sets, and Sharing Rules. The result was a secure and automated CRM application for event operations.

Milestone 1: Salesforce Account Setup

Salesforce Overview

Salesforce is a cloud-based CRM platform used to manage customer information, business processes, automation, reporting, and collaboration.

Activities

- Create Salesforce Developer Account.
- Verify Email and Activate Account.
- Login and Access Salesforce Setup.

Milestone 2: Custom Objects

Created Objects

Object	Purpose
Event	Stores event details
Client	Stores client information
Vendor	Stores vendor information
Venue	Stores venue details
Feedback	Stores client feedback
EventVendor	Links events and vendors

Relationships

- Event → Client (Lookup)
- Event → Venue (Lookup)
- Feedback → Event (Lookup)
- Feedback → Client (Lookup)
- EventVendor → Event (Master-Detail)
- EventVendor → Vendor (Master-Detail)

Milestone 3: Tab Creation

Custom tabs were created for:

- Event
- Client
- Vendor
- Venue
- Feedback

This improved navigation and accessibility within the Salesforce application.

Milestone 4: Fields & Relationships

Event Object Fields

- Event Type (Picklist)
- Event Date (Date)
- Event Status (Picklist)
- Event Budget (Formula)

Event Status Values

- Planned
- Confirmed
- Completed
- Pending Cancellation
- Cancelled
- Rejected

Event Budget Formula

The budget is automatically calculated based on the selected event type using a Salesforce Formula Field.

Milestone 4: Fields and Relationships

Client Object Fields

The following custom fields were created for the **Client** object:

- **Email** (Email)
- **Phone** (Phone)
- **Address** (Text Area)
- **Country** (Picklist)
- **City** (Picklist)

These fields help store client contact and location details in a structured format.

Vendor Object Fields

The following fields were added to the **Vendor** object:

- **Service Type** (Multi-Select Picklist)
- **Email** (Email)
- **Phone** (Phone)
- **Status** (Picklist)

Service categories include catering, decoration, photography, videography, lighting, transportation, DJ services, hosting, and stage setup. Vendor status is maintained as Available, Booked, or Cancelled.

Venue Object Fields

The following fields were created for the **Venue** object:

- **Address** (Text Area)
- **Location** (URL)
- **Capacity** (Number)
- **Availability Status** (Picklist)

These fields help manage venue information and booking availability.

Feedback Object Fields

The **Feedback** object contains:

- **Rating** (Picklist: 1–5)
- **Comments** (Long Text Area)

This information is used to collect customer feedback after event completion.

Relationship Configuration

Relationships were implemented to connect different objects within the EventForce system.

Lookup Relationships

- Event → Client
- Event → Venue
- Feedback → Event
- Feedback → Client

Master-Detail Relationships

- EventVendor → Event
- EventVendor → Vendor

These relationships establish proper data connectivity and support event planning, vendor assignment, venue management, and feedback tracking.

Implementation Summary

During this milestone:

- Custom fields were created for all objects.
- Picklists, email, phone, URL, number, and text fields were configured.
- Lookup and Master-Detail relationships were established.
- Data structure was designed to support event management workflows efficiently.

Milestone 4: Relationship Configuration

Lookup Relationships

The following lookup relationships were created:

- Event → Venue
- Event → Client
- Feedback → Event
- Feedback → Client

These relationships connect events with clients and venues while linking feedback records to the corresponding event and client.

Many-to-Many Relationship

A many-to-many relationship between **Event** and **Vendor** was implemented using the **EventVendor** junction object.

- EventVendor → Event (Master-Detail)
- EventVendor → Vendor (Master-Detail)

This structure allows multiple vendors to be assigned to an event and multiple events to be associated with a vendor.

Lookup Filter

A lookup filter was applied on the Feedback object to ensure that only events associated with the selected client are displayed. This improves data accuracy and prevents incorrect event selection.

Milestone 5: Validation Rules

Validation rules were created to maintain data quality and prevent invalid record creation.

Client Email Validation

A validation rule was implemented on the Client object to verify that the email address follows a valid format before saving the record.

Validation Rule: Email_Valid_Address

Purpose: Ensures users enter a properly formatted email address.

Milestone 6: Approval Process

An approval process was implemented to manage event cancellation requests in a controlled manner.

Email Templates Created

1. Event Cancellation Request Notification
2. Email to Client After Cancellation
3. Approval Notification to Event Owner
4. Rejection Notification to Event Owner

These templates are used to notify approvers, clients, and event owners during the cancellation workflow.

Event Cancellation Approval Process

Process Name: Event_Cancellation_Process

Entry Criteria:

- Event Status = Pending Cancellation

Approver:

- Event Coordinator / Assigned Manager

Approval Actions

Initial Actions

- Send cancellation request notification email.

Final Approval Actions

- Update Event Status to **Canceled**.

- Send approval notifications to the client and event owner.

Final Rejection Actions

- Update Event Status to **Confirmed**.
- Send rejection notification to the event owner.

Benefits

- Controlled cancellation management
- Automated notifications
- Reduced manual intervention
- Improved process transparency
- Better event tracking and monitoring

Milestone 6: Approval Process

An approval process was implemented to manage event cancellation requests efficiently.

Key Components

- Email templates for approval, rejection, and customer notifications.
- Event cancellation approval workflow.
- Automatic status updates based on approval decisions.
- Email alerts to event owners and coordinators.

Approval Workflow

1. Event status changes to **Pending Cancellation**.
2. Cancellation request is submitted for approval.
3. Assigned approver reviews the request.
4. Request is either **Approved** or **Rejected**.
5. System updates the event status and sends notifications automatically.

Approval Actions

If Approved

- Event Status → **Canceled**
- Notification sent to Event Owner
- Notification sent to Client

If Rejected

- Event Status → **Rejected**
- Rejection notification sent to Event Owner

Milestone 7: Flow Automation

Client Reminder Flow

A Record-Triggered Flow was developed to send reminder emails automatically.

Purpose

- Send a reminder to clients **3 days before** the event date.

Trigger Conditions

- Event Status = Confirmed
- Client email is available

Flow Actions

- Schedule reminder 3 days before the event.
- Generate email subject and message.
- Send reminder email to the client.
- Copy the Event Owner.

Benefits

- Automated communication
- Reduced manual follow-up
- Improved customer engagement

Milestone 8: Apex Class

Venue Status Management

An Apex Class (**VenueStatusHelper**) was developed to manage venue availability automatically.

Functionality

- When an event is confirmed → Venue Status = Reserved
- When an event is canceled → Venue Status = Available

Benefits

- Real-time venue updates

- Reduced manual administration
- Improved booking accuracy

Milestone 9: Apex Trigger

Double Booking Prevention

An Apex Trigger was implemented to avoid multiple bookings for the same venue on the same date.

Validation Logic

- Checks venue availability before saving an event.
- Compares existing bookings for the selected venue and date.
- Prevents record creation if a conflict exists.

Result

- Eliminates duplicate reservations.
- Maintains accurate scheduling.

Milestone 10: Batch Apex & Scheduled Apex

Automatic Event Completion

A Batch Apex process was created to automatically mark completed events.

Process Flow

1. Identify events with dates earlier than the current date.
2. Update Event Status to **Completed**.
3. Execute automatically through Scheduled Apex.

Benefits

- Automated status maintenance
- Reduced manual updates
- Improved data accuracy

Phase 3: UI/UX Development & Customization

This phase focused on creating a user-friendly interface using Salesforce Lightning Experience. Reports, dashboards, and custom navigation were developed to improve usability and operational visibility.

Milestone 11: Lightning App

EventForce Lightning Application

A custom Lightning App was created to provide centralized access to:

- Events
- Clients
- Vendors
- Venues
- Feedback
- Reports
- Dashboards

Benefits

- Easy navigation
- Centralized workspace
- Improved user experience

Milestone 12: Reports & Dashboards

Reports

Custom reports were developed to analyze:

- Upcoming Events
- Event Budgets
- Vendor Performance
- Client Feedback
- Event Status Tracking

Dashboard

The **EventForce Operations Dashboard** provides visual insights into:

- Upcoming Events
- Total Events

- Vendor Activities
- Client Feedback Ratings
- Event Performance Metrics

Benefits

- Real-time monitoring
- Better decision-making
- Improved operational visibility

Milestone 13: Dashboard

EventForce Operations Dashboard

A dashboard was created to provide a visual overview of event activities and performance.

Features

- Displays upcoming events by month.
- Uses graphical widgets for easy analysis.
- Provides quick insights into event schedules and operations.

Dashboard Component

- **Dashboard Name:** EventForce Operations Dashboard
- **Report Source:** Upcoming Events by Month
- **Chart Type:** Donut Chart
- **Purpose:** Visual representation of upcoming event distribution.

Phase 4: Data Migration, Testing & Security

This phase focused on preparing the system for operational use by importing data, configuring security, and validating functionality.

Key Activities

- Imported Event, Client, Vendor, Venue, and Feedback records.
- Created users and assigned appropriate roles.
- Configured Profiles, Permission Sets, Sharing Rules, and OWD.
- Tested automation, security, and data accuracy.

Outcome

The system became secure, reliable, and ready for business operations.

Milestone 14: Profiles

Custom profiles were created to define user permissions and access levels.

Profiles Created

Profile	Access Level
Event Admin	Full access to all modules
Event Coordinator	Manage events and feedback
Vendor Manager	Manage vendor records
Client Profile	View events and submit feedback

Benefits

- Controlled access to data.
- Improved security.
- Role-specific functionality.

Milestone 15: Roles

A role hierarchy was created to support data visibility and reporting structure.

Role Structure

CEO

↓

Event Admin

├— Event Coordinator

├— Vendor Manager

└— Client

Purpose

- Controls record visibility.
- Supports reporting hierarchy.
- Enhances data security.

Milestone 16: Users

User accounts were created and assigned appropriate profiles and roles.

Users Created

- Event Admin
- Event Coordinator
- Vendor Manager
- Client

Benefits

- Secure login access.
- Role-based permissions.
- Controlled system usage.

Milestone 17: Permission Sets

A permission set named **Feedback Manager** was created.

Permissions Granted

- Read
- Create
- Edit
- Delete

Purpose

Provides additional access to Feedback records without modifying user profiles.

Milestone 18: Sharing Settings

Organization-Wide Defaults (OWD)

The Event object was configured with:

- Internal Access → Private
- External Access → Private

Sharing Rule

Rule Name: Event_Sharing_For_Vendors

Shared By	Shared With	Access
Event Coordinator	Vendor Manager	Read Only

Benefits

- Controlled record sharing.
- Secure collaboration.
- Improved data protection.

---

7. FUNCTIONAL & PERFORMANCE TESTING

System testing was conducted to verify:

- Event creation and management
- Vendor assignment
- Venue booking validation
- Approval workflows
- Reminder automation
- Batch processing
- Reports and dashboards

All functionalities operated successfully and met project requirements.

---

8. ADVANTAGES & LIMITATIONS

Advantages

- Centralized event management platform.
- Automated reminders and approvals.
- Prevention of duplicate venue bookings.
- Enhanced reporting and analytics.
- Secure role-based access control.
- Improved data accuracy through validations.
- Scalable Salesforce-based solution.

Limitations

- Developed in Salesforce Developer Edition.

- Production deployment not included.
- Requires Salesforce knowledge for maintenance.
- Advanced deployment needs additional tools.
- Periodic monitoring of automation is required.

---

9. CONCLUSION

The **EventForce Management System** successfully demonstrates how Salesforce can be used to automate and manage event operations. The solution integrates Events, Clients, Vendors, Venues, Feedback, and EventVendor records into a single platform.

Using Flows, Validation Rules, Approval Processes, Apex, Reports, and Dashboards, the system improves efficiency, reduces manual work, and supports effective event management. Although developed in a Salesforce Developer Org, the project reflects real-world CRM implementation practices and provides a foundation for future enhancements.

---

10. FUTURE SCOPE

The system can be enhanced further through:

- Production deployment in Salesforce.
- Advanced workflow automation.
- Enhanced vendor management features.
- Additional reports and dashboards.
- Integration with external applications.
- Mobile-friendly event management.
- Improved scalability and performance.
- Continuous maintenance and optimization.

These enhancements can transform EventForce into a more comprehensive enterprise-level event management solution.
